

How can I protect my dog?

Loud noises are frightening

Dogs can be easily startled. Fireworks, thunderstorms, loud noises and even parties can be frightening to dogs. Many dogs will go to extreme lengths to escape from what they think is going to hurt them. In trying to feel safe, dogs can injure themselves by climbing fences, running away or squeezing into tight corners. An escaped dog is often distressed and may attack or harass people or other animals, causing property damage, or they may cause a road accident injuring the dog or damaging the vehicle. All of which becomes the responsibility of the dog owner.

We understand...

...it is important to think ahead,
Will my dog be frightened
by what's coming up?

Dogs and loud noises: the facts

- Loud noises and bursts of light frighten dogs.
- A dog's fear of loud noises is instinctive.
- Consult your vet. They may have strategies to reduce stress, or might prescribe sedatives to calm your dog.

There are many things you can do to prepare when a loud noise or event is happening:

- Keep your dog securely inside
- Ensure it can't escape from your home
- Stay with your dog to reassure it that it is safe
- Familiar noises, such as radio or TV may help
- If you will not be home consider a boarding kennel or sending your dog to a friend or family member's home away from the noise
- Ensure your dog has a current registration disc along with name tag or microchip identification which is up-to-date, then should it escape, it can be quickly reunited.

We understand...
...From July 2018,
it's mandatory to have
your dog microchipped.
This is a safe and
permanent way of
identifying your dog,
should it become
lost, or run away
from loud noises.

What the owner can do

There are a number of things you can do to prepare your dog should you know that a party will be held nearby, or that thunderstorms are forecast, or fireworks and loud public celebrations are planned.

Before the event:

Ensure that your dog can't escape and that it is secured indoors in a shed or within a fenced property. Check your dog has a current registration disc along with name tag or microchip identification so that if found it may be returned home quickly.

During the event:

Reassure your dog that it is safe; let it be near you, you are its greatest security. Allow your dog hiding spots for example under the bed or behind the lounge suite. Familiar noises, such as a radio or television may help. In extreme or repeated situations your veterinarian can prescribe sedatives for dogs that have a strong reaction to these types of events. If you will not be home and these approaches are not possible, consider the use of boarding kennels or sending your dog to a friend or family member's home away from the noise.

Be a responsible event organiser

Inform your neighbours so they can make arrangements for their dogs and themselves. Also indicate the expected type of event (e.g. midnight fireworks for five minutes or a party from 8pm to 2am). Consider enclosing this Information Sheet, or pointing them to our website.

If your dog escapes

As soon as you realise your dog is missing, take action. Contact your local council, your neighbours, your local vet, plus other pet services and groups, such as the RSPCA and Animal Welfare League or visit their shelters. If not found quickly consider a letterbox drop, notices in local shops, schools and shopping centres.

Dogs and loud noises: a good owner tip

A microchip is only an effective means of returning your lost dog when the details linked to that chip are up-to-date. If you move house, change phone numbers, or any of your other important contact details, be sure to update your dog's council registration and microchip details.
